

Altair Bulk Softener Systems

Softeners are used to soften water by removing the dissolved calcium and magnesium salts. These salts cause scale build-up in boiler tubes, piping, heat exchangers, etc. Altair can furnish complete bulk softener systems for both industrial and commercial applications. Use of a bulk system allows you to purchase the salt at a significant discount over bagged salt and eliminates the need for your personnel to handle heavy salt bags, thereby reducing the risk of injury and freeing your personnel for other tasks.
